

## APPENDIX 1

7.  $N^{\omega}\text{-Carboxyalkylcarbamoyl-}\alpha,\omega\text{-diamino acids of general formula}$

in which A represents a bivalent group consisting of a linear carbon chain formed from 4 to 8 carbon atoms, which chain is optionally substituted by one or a number of groups chosen from  $C_1$  -  $C_3$  alkyl groups and functional groups comprising at least one oxygen or sulphur atom and in which  $R_3\text{-}N^aH$  represents an  $\alpha$ -amino acid [or a peptide comprising the  $\alpha$ -amino acid] and  $N^a$  is a nitrogen atom attached to the  $\alpha$ -carbon of the  $\alpha$ -amino acid.
